Aquila 2 is for teams seriously committed to HPV racing.

A small but roomy compartment means you have all the ingredients on hand to go seriously fast! Aquila's Kevlar/Composite vacuum-infused body with built-in roll frames makes this model one of the toughest, lightest and most durable racing HPVs available.

The Trisled Racing Team has been racing Aquila since 2010, achieving impressive results. You can be sure that the speed improvements we've made over the years will be included in your vehicle!

We've made some significant improvements to the fairing and chassis to improve the cornering speed. Now supplied as standard with a replaceable nose cone section, allowing the front to be replaced if necessary after significant damage.

IMPORTANT INFORMATION:

All Trisled racing vehicles are built at our factory on the Mornington Peninsula by people who race HPV's. New models are tested by our racing team for 6-12, months before we release them to ensure reliability, durability and performance. Aquila 2 is a racing HPV and is not suitable for road use. Scrutineering requirements for this vehicle differ between races and are subject to change. While Trisled makes every effort to ensure that our racing models are compliant with Australian HPV racing regulations, we cannot guarantee that our machines will meet scrutineering requirements.
